

QA TEST REPORT

Build 1.0.0 (47)

14 Jun 2026

App [Client App Name]

Platform iOS 18 · iPhone

Method

Automated 14-flow pipeline

14

Flows Tested

13

Passed

1

Partial / Failed

0

Crashes

VERDICT

GREEN

13 of 14 flows passed with zero crashes. One partial — push notification foreground banner inconsistent. Core flows (Auth, Payments, KYC, user flow) all clean.

Flow Results

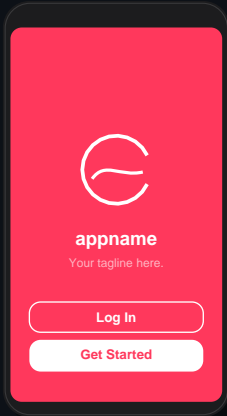

#	Flow	Key Steps Verified	Result
1	Authentication	Email OTP + session persistence. Login gate enforced correctly.	PASS
2	Traveller Home	Active trip card, greeting, quick actions, navigation tabs.	PASS
3	Updates & Today's Plan	Organiser updates feed, daily itinerary timeline renders.	PASS
4	Explore & Browse	Search, filters, open-to-join trip cards, trust badges visible.	PASS
5	Trip Detail	Overview, Itinerary, Updates, Travellers tabs all switch cleanly.	PASS
6	Profile & Social	View profile, follow / message gating enforced.	PASS
7	Organiser Dashboard	Needs-attention, active trip stats, revenue snapshot.	PASS
8	Requests & Documents	Pending join requests, missing-document review flow.	PASS
9	Trip Creation & Publish	Multi-step create wizard, preview, publish end to end.	PASS
10	Organiser Broadcast	Send update to all approved travellers. Delivered correctly.	PASS
11	Payments & Receipts	Payment flow, receipt generation, wallet record confirmed.	PASS
12	Push Notifications	System delivery works. Foreground in-app banner inconsistent.	PARTIAL
13	Travel Wallet	Travel ID, documents, receipts vault. All records present.	PASS
14	Identity Verification	Verification tiers enforced. Join-gate blocks unverified users.	PASS

Defect Report

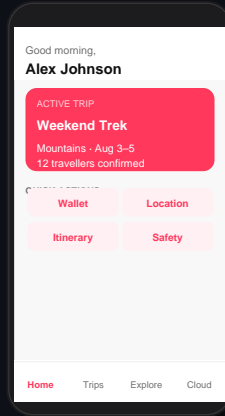

LOW	DEF-PN-01	Push notification banner not shown in foreground	Flow 12 — Push Notifications
Steps	1. Log in on Build 47. 2. Trigger a broadcast. 3. Keep app in foreground. 4. Observe top banner.	Status	Open — re-test next build
Expected	In-app banner appears. Tapping it opens the trip channel.	Priority	Medium

Actual	System delivery and tap-through work. Foreground banner does not render consistently.	Likely Cause	Foreground handler not registered before notification fires. Check useEffect cleanup.
